

How To Install WordPress On Your Server Using Softaculous

In this Tutorial we are going to learn How to install wordpress your server using Softaculous?

What is WordPress?

WordPress is an open source CMS (Content Management System) coded in PHP and MySQL. WordPress is completely free and it allows us to easily customize the look of our website using its themes and plugins architecture.

What is Softaculous?

Softaculous is an Auto Installer program. Softaculous helps you to install free/opensource applications in a couple of minutes. Softaculous installation scripts cover a wide range of web applications. Categories include ad management, blogging, content management, CRM, customer support, eCommerce, ERP, and more. Currently, 413 scripts are available.

Installation of a web application through Softaculous is designed to be a 1-click process, after filling in any necessary information on the install tab for the application concerned. Softaculous then automatically organizes database configuration, user permissions, web server files, and installation.

Prerequisites:

Cpanel login details

Process:

Login into **Cpanel** account go to Lastpass vault

After that you can see below screen

A.] click on [...] icon to open lastpass vault.
