

How to use Wordpress as a SAAS

What Do you mean by WordPress to SAAS:

We can make use of wordpress for building SAAS based application that we generally built with Codeigniter.

Why to go for WordPress as a SAAS:

Main reason behind creating wordpress as a SAAS based application is enhance some wordpress built in facilities such as task scheduling, User Accessibility , flexible hooks . This is also helpful if we are wishing to revamp any present plugin into SAAS based application.

Prerequisites:

We need a wordpress setup where we can built our application. For more personalisation we can use our very own Rebrandpress 2.0 plugin which can help us to hide wordpress branding information and can apply customisable branding.

Process:

Please follow below tutorial for help,

<http://www.dtelepathy.com/blog/products/wordpress-saas-application-platform>

It's necessary to give appropriate capabilities for User levels. We can achieve this using Rebrandpress plugin. Please follow below steps for setting up user capabilities.

1. Goto Rebrandpress plugin from your admin area.
2. Then Open up 'Options' accordian.
3. Check , uncheck your capabilities that you wish to assign for different different user levels.
4. Finally hit 'Save Changes' button for saving your changes.
