

How to Integrate GotoWebinar in SaaS

In this Tutorial we are going to learn how to Integrate Goto Webinar in SaaS?

What is GotoWebinar?:

GotoWebinar get better leads and engage your audience with our webinar resources.

Why we use GotoWebinar? What is the purpose?:

When user buy our product then his email and data directly added into our specified **Webinar**. We are using **GotoWebinar** because we can schedule post launch webinar on **GotoWebinar** .we are using this because of we are getting list of unique user of products.

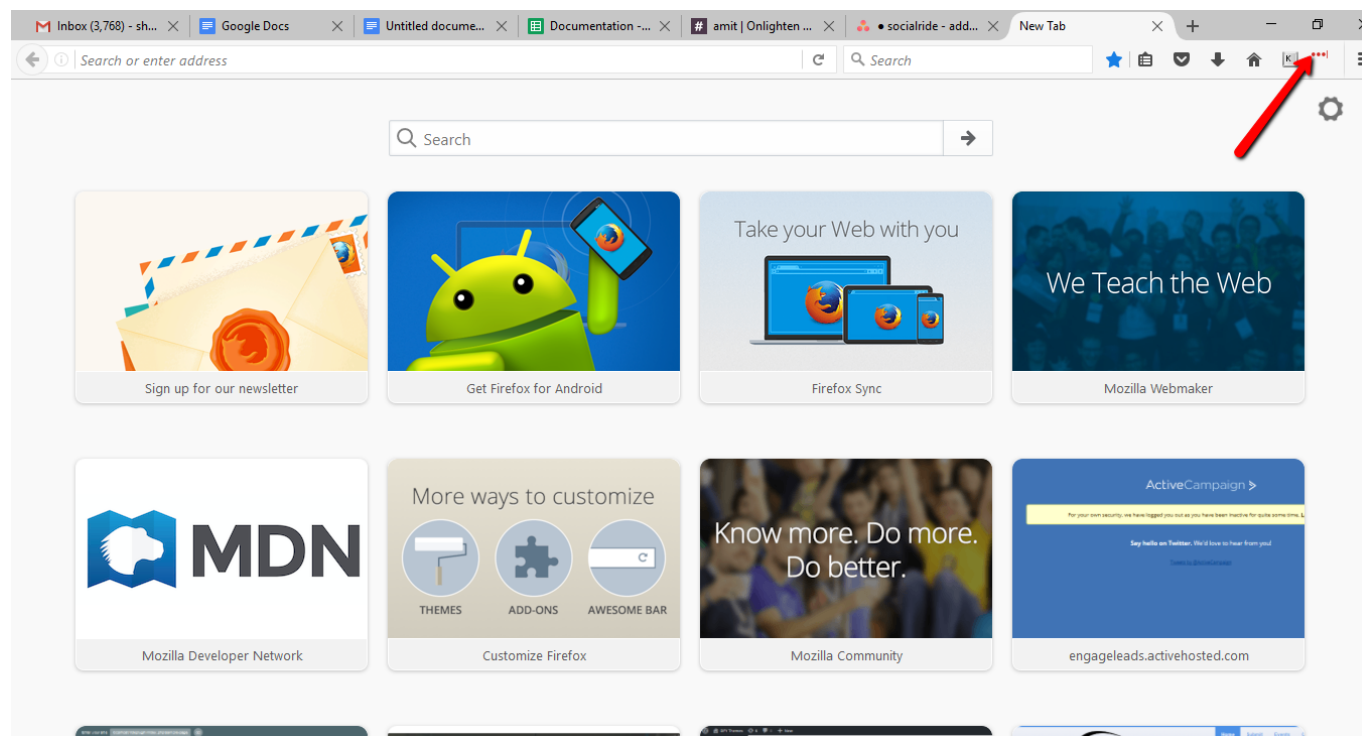

Prerequisites:

Process:

Step 1:

A] Create list in active campaign account.

i) Click on (...) icons

ii) Click on “My Lastpass Vault” text

B.]Enter citrix' keyword and hit on 'Enter' button

C.]Click on first result which is contains 'citrix'

iii) Now you can see dashboard of GotoWebinar account.

A.]Hit on '**GotoWebinar**' menu

B.]Hit on '**Schedule a Webinar**' button.

After that you can see schedule webinar form .

a).copy webinar

If you want to copy of any previous webinar then select that webinar which you want to copy

b)Title of your webinar

c) Description of your webinar

d) Goal of your webinar

e) start time,start date ,end time,timezone and language of your webinar

After filling all information hit on ‘Schedule’ button.After hitting that button one popup arrives and you can see co-organizer tab or list of email.

If you want to add this email as co-organizer or panelist then check that email and hit on **save** button or else directly hit on **save** button.

After that you can see details page of your created webinar.

If you want to add more co-organizer and panelist then you can **edit** that particular section and add their name and email and hit on **save** button.

f) For Registration url:

You can see ‘**Share Your Webinar**’ section.

In that section you can get Registration url which url we have add in

Thank you page etc.

g) For Webinar key:

Click on your created webinar and You can see Webinar key in address bar, Copy that key and store it. This key is used when you will integrate GotoWebinar in saas based application.

Step 2:

1. clone github repository of previous project

i) First download Github application for windows

Click on below url for downloading Github application

<https://desktop.github.com/>

ii) Open Github application and follow below steps please see below link

2. Copy the clone project from your clone repository path into your localhost

For copying project follow below steps

3. Go to Your localhost Project Folder

4.

i) Go inside application Folder

In that folder you can see “config”, “controller”, “model”, “libraries”, “views” folder

a). Go inside “controller” folder

After that open “auth.php” file in editor .

Once you have opened that file then find **‘jvzooListener’**

For FE User

A]

i) You can see **‘jvzooListener’** is the function and in that function you have to find that **‘\$this->ion_auth->register’** this line .

ii) If this line is present then Enter below line just after register function

```
$this->selectautoresponder($access);
```

If above line is already present then no need to add above line again.

iii)

Find '**selectautoresponder**' function in auth.php

If this function is not present then copy those function from your cloned repository and paste it in your projects auth.php file.

if function already present then go to next step.

iv)

Now you can see this function calling more three function that is

```
'active campaign', 'GotoWebinar', 'convertkit'.
```

v)

In this tutorial we are going to learn '**GotoWebinar**' function only.

In this function you have to change some necessary

fields (**webinar key**).

You can get webinar key in '**GotoWebinar**' (see above step that is Step1-> A->g).

Replace that necessary changes and save that file.

Testing or What can go wrong?

Sometimes we forget to replace **webinar key**.
