How to Create Mockups Using Dropmock

What is Dropmock:

Dropmock is a cloud-based design suite allows users to create high quality video and image mockups from pre-defined templates within the software.

Why we use Dropmock:

Dropmock can provide us with mockups that users can relate to. We can present products and designs in particular template and showcase them how it should appear on their devices or environment.

Prerequisites:

A purchase of Dropmock access is necessary before you can start creating high-end templates.

Process:

1. Login using your account at https://app.dropmock.com/auth/login

2. Choose from existing templates upon login or search for a category/type on the search bar.

3. Hit USE button to select the template.

4. Upload an image or video by clicking on the upload button or provide a URL of the image.

5. Select a crop area

6. Add text Effect option is available if you want to add text to images

7. Download the final image and upload it to your site

What can go wrong:

Dropmock is a good tool and creates mockups in seconds. It is very ideal for creating mockups in a matter of minutes. For creating mockups it serves its purpose and I can't find any issue with it.
