

In this Tutorial we are going to learn How to create wordpress site at localhost.

In this Tutorial we are going to learn How to create wordpress site at localhost.

What is WordPress?

WordPress is an open source CMS (Content Management System) coded in PHP and MySQL. WordPress is completely free and it allows us to easily customize the look of our website using its themes and plugins architecture.

Prerequisites:

You need to download wordpress zip file from www.wordpress.org ,xampp installed,you need to unzip it in htdocs folder.localhost/phpmyadmin,browser.

Process:

How to create wordpress site at localhost?

First start your xampp or wamp server

1.you need to create a database table at localhost/phpmyadmin

2.In browser open your link and setup the wordpress

Click on continue

3.set the database name which you have created earlier for wordpress site

Keep username and password field empty.

Click on submit

4.then click on run installation

5.give site a title

Provide details accordingly

6.Then click on install wordpress

7.login using admin and password which you have set in previous step

Testing or What can go wrong?

1.most of the time we forget to create database for wordpress

First create database for the wordpress which you are going to install.

Then visit the localhost/wordpress(foldername) in the browser

2.refer process 5 step,please enter details carefully and remember the

Login and password .
