

How to share access from one lastPass User to another User

Step 1 : Go to lastpass vault in the right hand side of your screen.select it.

Step 2 : select “Show Matching Sites” from drop down.

Step 3 : Select more option to edit.

Step 4 : Select Edit option from drop down.And you will redirect to Free LastPass Manager.

Step 5 : Select share option.

Step 6 : Add Email address in Recipient Email Address.

Step 7 : Select the checkbox “Allow ReciPient To View Password “.

Step 8 : Select Share button.

Step 9 : Then you will see the message on the top that” Success Share sent to “abc@[gmail.com](mailto:abc@gmail.com) “

One more way to share from lastpass to another user :

Step 1 : Select LastPass Vault in the right side.select Open My Vault.

Step 2 : You will redirect to another window in the search bar search something like “engageleads.”

Step 3 : Select share option.

Then you need to follow step no 6 to share.

Why We Use Last Pass :

Your data is encrypted and decrypted at the device level. Data stored in your vault is kept secret, even from LastPass. Your master password, and the keys used to encrypt and decrypt data, are never sent to LastPass’ servers, and are never accessible by LastPass.

If you share passwords without revealing them, you won't have to change it each time you revoke someone's access. LastPass lets you give emergency access to others. Users with emergency access can make a request for access to your password. You will receive a notification of the request, and if you don't reject it within a time limit previously set by you, the password is shared.
